Medical MD0067200 Health Care Ethics II

The Patient's Right to Know the Potential Risks and Benefits. Principle 13 of the Patient's Bill of Rights (see Appendix) covers the concept of patient consent: "The patient has a legal right to refuse any particular drug, test, procedure, or treatment." Today, more than ever, with the many new, complex, and relatively untried diagnostic and therapeutic procedures available, it is important to make certain that patients give their consent to procedures with an understanding of the risks and benefits. It is not just the complex procedures that pose risks. Even simple procedures can present problems. Infection may be introduced by a needle; sudden death may follow the intravenous administration of such relatively inert substances as dehydrochloric acid. No agent that can modify the internal environment of the body can be used without hazard. Entry by needles or other instruments into tissues, vessels, or cavities of the body involves risk of infection.
