Sintering: Densification, Grain Growth and Microstructure

Suk-Joong L. Kang

Sintering: Densification, Grain Growth and Microstructure Suk-Joong L. Kang

Sintering is the process of forming materials and components from a powder under the action of thermal energy. It is a key materials science subject: most ceramic materials and many specialist metal powder products for use in key industries such as electronics, automotive and aerospace are formed this way. Written by one of the leading experts in the field, this book offers an unrivalled introduction to sintering and sintering processes for students of materials science and engineering, and practicing engineers in industry.

The book is unique in providing a complete grounding in the principles of sintering and equal coverage of the three key sintering processes: densification, grain growth and microstructure. Students and professional engineers alike will be attracted by the emphasis on developing a detailed understanding of the theory and practical processes of sintering, the balanced coverage of ceramic and metal sintering, and the accompanying examination questions with selected solutions.

- Delivering unrivalled depth of coverage on the basis of sintering, science, including thermodynamics and polycrystalline microstructure.
- Unique in its balanced coverage of the three key sintering elements - densification, grain growth and microstructure.
- A key reference for students and engineers in materials science and engineering, accompanied by examination questions and selected solutions.

From reader reviews:

Willie Hodges:

Book is to be different for each and every grade. Book for children right up until adult are different content. As it is known to us that book is very important normally. The book Sintering: Densification, Grain Growth and Microstructure has been making you to know about other know-how and of course you can take more information. It is quite advantages for you. The reserve Sintering: Densification, Grain Growth and Microstructure is not only giving you a lot more new information but also to get your friend when you experience bored. You can spend your own personal spend time to read your guide. Try to make relationship with the book Sintering: Densification, Grain Growth and Microstructure. You never really feel lose out for everything in case you read some books.

Ila Petty:

As people who live in the actual modest era should be revise about what going on or info even knowledge to make these individuals keep up with the era and that is always change and move ahead. Some of you maybe will update themselves by studying books. It is a good choice for yourself but the problems coming to a person is you don't know which you should start with. This Sintering: Densification, Grain Growth and Microstructure is our recommendation to help you keep up with the world. Why, because this book serves what you want and wish in this era.

Ashley Staley:

A lot of e-book has printed but it differs. You can get it by world wide web on social media. You can choose the very best book for you, science, comedy, novel, or whatever by searching from it. It is called of book Sintering: Densification, Grain Growth and Microstructure. You'll be able to your knowledge by it. Without leaving the printed book, it might add your knowledge and make you happier to read. It is most crucial that, you must aware about guide. It can bring you from one spot to other place.

Penny Risley:

What is your hobby? Have you heard this question when you got learners? We believe that that problem was given by teacher to the students. Many kinds of hobby, Everyone has different hobby. And you also know that little person including reading or as reading become their hobby. You have to know that reading is very important and book as to be the factor. Book is important thing to incorporate you knowledge, except your own personal teacher or lecturer. You find good news or update concerning something by book. A substantial number of sorts of books that can you choose to use be your object. One of them is Sintering: Densification, Grain Growth and Microstructure.
